

Serial No. : 09/924,235
Filed : August 8, 2001

IN THE CLAIMS:

Please amended the claims as follows:

1. (Currently amended) A radiowave monitoring method comprising the steps of:

creating simulated patterns of intensities and emitting directions of a simulated radiowave ~~emitted~~ emission from one position in an observation area, the simulated patterns of intensities and emitting directions being produced through computer simulation for plural positions in the observation area;

obtaining an observed pattern of intensities and arrival directions of a radiowave which is emitted from a radiowave emitting source, the observed pattern of intensities and arrival directions being obtained at said one position;

comparing the simulated patterns at said plural positions with the observed pattern at said one position; and

identifying a position out of said plural positions whose simulated pattern shows the best correlation with the observed pattern at said one position as a location of the radiowave emitting source.

2. (Canceled)

3. (Currently amended) A radiowave monitoring method according to claim 1, wherein

in creating the simulated patterns of intensities and emitting directions of the simulated ~~radiowaves emitted~~ radiowave emission

Serial No. : 09/924,235
Filed : August 8, 2001

from said one position, the observation area is two-dimensionally divided into a plurality of regions, and electric field intensities to be observed in the respective regions are computed.

4. (Currently amended) A radiowave monitoring method according to claim 3, wherein

in creating the simulated patterns of intensities and emitting directions of the simulated ~~radiowaves-emitted~~ radiowave emission from said one position, while changing the emitting direction of the simulated radiowave ~~emitted~~ emission from said one position, the electric field intensities to be observed in the respective regions are computed to obtain electric field intensity distributions for the respective emitting directions.

5. (Currently amended) A radiowave monitoring method according to claim 1, wherein

in creating the simulated patterns of intensities and emitting directions of the simulated ~~radiowaves-emitted~~ radiowave emission from said one position, the observation area is three-dimensionally divided into a plurality of spaces, and electric field intensities to be observed in the respective spaces are computed.

6. (Currently amended) A radiowave monitoring method according to claim 5, wherein

in creating the simulated patterns of intensities and emitting directions of the simulated ~~radiowaves-emitted~~ radiowave emission from said one position, while changing the emitting direction of the simulated radiowave ~~emitted~~ emission from said one position,

Serial No. : 09/924,235
Filed : August 8, 2001

the electric field intensities to be observed in the respective regions are computed to obtain electric field intensity distributions for the respective emitting directions.

7. (Currently amended) A radiowave monitoring method according to claim 3, wherein

in creating the simulated patterns of intensities and emitting directions of the simulated ~~radiowaves-emitted~~ radiowave emission from said one position, geography and ground objects in the observation area are taken into consideration.

8. (Currently amended) A radiowave monitoring method according to claim 5, wherein

in creating the simulated patterns of intensities and emitting directions of the simulated ~~radiowaves-emitted~~ radiowave emission from said one position, geography and ground objects in the observation area are taken into consideration.

9. (Currently amended) A radiowave monitoring method according to claim 1, wherein

based on the location of the identified radiowave emitting source and the ~~simulation-result~~ simulated patterns, propagation path of the radiowave from the radiowave emitting source to said one position is traced.

10. (Original) A radiowave monitoring method according to claim 9, wherein

based on a result of tracing the propagation path, antenna directivity of the radiowave emitting source is estimated.

Serial No. : 09/924,235
Filed : August 8, 2001

11. (Previously amended) A radiowave monitoring method according to claim 10, wherein

based on the estimated antenna directivity of the radiowave emitting source, an electric field intensity distribution of the radiowave emitted from the radiowave emitting source is computed.

12. (Currently amended) A radiowave monitoring apparatus comprising:

a radiowave observing means disposed at one position in an observation area, for observing a pattern of intensities and arrival directions of a radiowave emitted from a radiowave emitting source;

a simulation means for generating simulated patterns of intensities and emitting directions of a simulated radiowave emission from one position to a plurality of positions in the observation area through computations performed while changing the emitting direction of the simulated radiowave and storing the results ~~storing means for storing simulated patterns of intensities and emitting directions at other plural positions in the observation area of a simulated radiowave emitted from said one position, the simulated patterns being obtained through computation performed by a simulation means while changing the emitting direction of the simulated radiowave;~~
and

a radiowave emitting source identifying means for comparing the pattern observed by the radiowave observing

Serial No. : 09/924,235
Filed : August 8, 2001

means at said one position with the simulated patterns of said plurality of position stored in the ~~storing~~ simulation means to identify a position out of said ~~plural~~ plurality of positions whose simulated pattern shows the best correlation with the pattern observed by the radiowave observing means at said one position as a location of a radiowave emitting source.

13. (Currently amended) A radiowave monitoring apparatus according to claim 12, wherein

the simulation means two-dimensionally divides the observation area into a plurality of regions, and computes electric field intensities of the simulated radiowave ~~emitted~~ emission from said one position, which are to be observed in the respective regions.

14. (Currently amended) A radiowave monitoring apparatus according to claim 13, wherein

the ~~storing~~ simulation means stores electric field intensities of the simulated radiowave ~~emitted~~ emission from said one position in different emitting directions, which are to be observed in the respective regions, for the respective directions.

15. (Currently amended) A radiowave monitoring apparatus according to claim 12, wherein

the simulation means three-dimensionally divides the observation area into a plurality of spaces and computes electric field intensities of the simulated radiowave ~~emitted~~ emission from

Serial No. : 09/924,235
Filed : August 8, 2001

said one position, which are to be observed in the respective spaces.

16. (Currently amended) A radiowave monitoring apparatus according to claim 15, wherein

the ~~storing~~ simulation means stores electric field intensities of the simulated radiowave ~~emitted~~ emission from said one position in different emitting directions, which are to be observed in the respective spaces, for the respective directions.
